GHK-CU Copper Peptide Vial for Sale

OptimalPeptides Notice ⚠
Products are for laboratory research purposes only. Not for human consumption. Statements haven't been evaluated by the US FDA. Not intended to diagnose, treat, cure, or prevent diseases. Handle with care, follow lab safety protocols. Operates independently of FDA-regulated compounding pharmacies (503A) and outsourcing facilities (503B).

Overview

GHK-CU Copper Peptide is a tiny research chemical formed by attaching a short peptide (GHK) to a copper ion. This copper-peptide combination is often used for its function in cell signaling, tissue modeling, collagen pathways, and regeneration-related research findings.

This product comes as a lyophilized (freeze-dried) powder in a vial. When larger amounts are used, more liquid may be needed to fully dissolve the peptide.

Category	Details
Product Name	GHK-CU Copper Peptide
CAS Number	89030-95-5
Molar Mass	340.38 g/mol
Chemical Formula	$C_{14}H_{24}N_6O_4$
Form	Lyophilized powder (vial)

Working Mechanism

Copper plays an important role in many cell processes, and the GHK peptide helps carry copper in a stable form so researchers can study its mechanism. GHK-CU is used to see how copper-linked peptides affect cell repair signals.

Scientists are also studying how this compound affects cell repair signals, collagen-related protein activity, and gene signaling linked to growth and recovery. These changes are tracked using the right laboratory tools over days or weeks.

Find answers to common questions about **GHK-CU**

Frequently Asked Questions

What is GHK-CU mainly studied for?

It is studied to understand how copper-linked peptides affect cell repair signals.

Why is copper important in this compound?

How is GHK-CU typically handled in laboratory research?

What form does this product come in, and why does it matter?

Where can I buy GHK-CU Copper Peptide for sale?
